SUMMARY

Control & Automation Engineering undergraduate at UNESP (2021–2026), with hands-on experience in robotics, control systems, and AI (perception and human-centered applications such as gait analysis and human–robot interaction). Experienced through RoboCup (Brazil 2018/2023, Sydney 2019) and projects involving image recognition, scale autonomous vehicles, and recommender systems. Seeking a research visit opportunity in Bavaria to contribute to an active research group while building a strong foundation for future graduate studies and international research collaborations.

WORK EXPERIENCE

President (Student Organization) — LUNAR 2024 – 2025
University League of Autonomous Navigation & Robotics (LUNAR) — UNESP, Sorocaba, Brazil

- ✓ Led and administered the student league, coordinating activities and technical deliveries.
- ✓ Applied Scrum practices to organize sprints, assign responsibilities, and track progress.

Vacation Intern Jan 2023

FIT — Flextronics Institute of Technology

- ✓ Developed embedded software for IoT prototypes and introductory mobile features.
- ✓ Explored communication networks (e.g., Wi-Fi/Bluetooth) and basic cloud computing workflows.

EDUCATION

B.Sc. (Undergraduate) — Control & Automation Engineering 2021 – 2026
UNESP — Sorocaba, Brazil

- ✓ Expected graduation: 2027

SELECTED EXPERIENCE

Competitive Robotics (Major Level) 2023 – 2025
RoboCar Race 2025

- ✓ Achieved **2nd place** in the RoboCar Race with the team LUNAR.

RoboCup Brazil / Latin American Robotics Competition (LARC) 2023

- ✓ Competed in the **Very Small Size Soccer (VSSS)** category.

Competitive Robotics (Junior Level) 2014 – 2019

Brazil (OBR, FLL, LARC, RoboCup Brazil and International)

- ✓ Built teamwork and engineering fundamentals through multi-year competition participation.

Advanced English Program 2015 – 2018
Cultura Inglesa São Paulo

COURSES & TRAINING

DeepLearning.AI (Coursera)

- ✓ *Neural Networks and Deep Learning* — completed Feb 2025 (Verify: K4Y4807QE05W)
- ✓ *Improving Deep Neural Networks: Hyperparameter Tuning, Regularization and Optimization* — completed Mar 2025 (Verify: FJ8L20AYXP8)

FIT — Flextronics Institute of Technology

- ✓ AI Starter Track (40h, Remote): Python basics; data analysis/visualization with NumPy, pandas, matplotlib, seaborn; basic AI concepts.
- ✓ AI Practitioner Track (32h, Remote): Introduction to Machine Learning (supervised and unsupervised).
- ✓ IoT Communication Networks (20h, In-person): Wi-Fi, Bluetooth, LoRa, 3G/4G/5G.
- ✓ IoT Applications: Development & Hands-on (20h, In-person): Embedded IoT development; pitch creation and presentation.

SKILLS

Languages

- Portuguese (Native):
- English (B2):
- German (A1):

Technical

- Microcontrollers & SBCs (5+ years): Arduino, ESP32, Raspberry Pi, NVIDIA Jetson Nano
- Python (5+ years): data analysis and visualization
- C / C++ (5+ years)
- AI (2 years): machine learning, deep learning, computer vision
- MATLAB & Simulink (3 years): control systems
- CAD & 3D Modeling (4 years): AutoCAD, Fusion 360
- Scrum & Leadership (3 years)
- IoT Development (3 years): Wi-Fi, Bluetooth/BLE, LoRa, 3G/4G/5G

PUBLICATIONS

- ✓ Castro, M. L.; da Silva, C. A. M.; Costa, D. O.; Souza, L. V.; Escalante, F. M.; Lusquino Filho, L. (2026). "A Tiny Recursive Multi-Head Model for Semantic Traffic Sign Recognition in Autonomous Robotics." Accepted (CROS 2026).
- ✓ Castro, M. L.; da Silva, C. A. M.; Morello, L. M.; Leal, F. H. G.; Lusquino Filho, L. (2025). "Selfie2Product: Hair and Product Embeddings for Multimodal Haircare Recommendation." Accepted (LAFUSION 2025).
